

UI/UX Design with Figma - Hour 5: Working with Components

Hour 5: Working with Components in Figma (2 Academic Hours)

- Goal: Teach students how to create, reuse, and manage components like buttons, cards, and navigation in Figma.

1. What Are Components?

- Definition:
 - Components are reusable design elements (buttons, navbars, cards).
- Why use components?
 - Edit once, update everywhere.
 - Maintain consistency.
 - Essential for design systems and scalable design.
- Example: Update a button style across 50 screens instantly.

2. How to Create a Component

- Steps:
 - Design the element (e.g., a button).
 - Select and right-click -> 'Create component' or press Cmd/Ctrl + Alt + K.
 - A purple outline shows it's a Main Component.
- Instances:
 - Drag from Assets panel.
 - Edits to the main component update all instances.
 - You can customize instance text without unlinking.
- Tip: Keep main components in a separate page or section (e.g., 'Component Library').

3. Creating Buttons, Cards & Navigation

- Buttons:
 - Primary: Filled background.
 - Secondary: Outline style.
 - Ghost: Text-only.
 - States: Default, Hover, Disabled.
 - Properties: 44px height, centered text, Auto Layout for padding.
- Cards:
 - Include image, title, description, and optional button.
 - Use shadow and border-radius for elevation.
 - Use Auto Layout inside cards.
- Navigation Bars:
 - Logo + Menu links.

- - Horizontal layout with constraints.
- - Optionally sticky at top of screen.

4. Working with Variants (Advanced)

- Variants combine related components (e.g., Button: Primary, Secondary, Ghost).
- Steps:
 - - Select components -> 'Combine as Variants'.
 - - Add properties like Type and State.
 - - Use dropdowns to switch types in instances.
 - Tip: Keeps components organized and flexible.

5. Task: Create Button Components & Use in Layout

- Create 3 button components:
 - - Primary: Blue background, white text.
 - - Secondary: White background, blue border.
 - - Ghost: Transparent background, blue text.
- Use them in a layout:
 - - Create a card: Title, description, button.
 - - Hero section: Call-to-action with 2 buttons.
 - Bonus: Use Auto Layout and proper spacing.

6. Presentation & Review

- - Students present their button components.
- - Demonstrate global updates from the main component.
- - Encourage peer review and suggestions.
